GIT QUICK REFERENCE CARD

© 2011 Gabriel Burca - Permissions on back. v1.0 Sep 2011

Main commands add Add file contents to the index		
	adds all file changes including deletions to the staging area [for the whole tree]	
<i>-f</i>	Allow adding otherwise ignored files	
am	Apply a series of patches from a mailbox	
archive	Create an archive of files from a named tree	
bisect	Find by binary search the change that introduced a bug	
branch	List, create, or delete branches	
-a	lists all branches including the remote branches	
-d	$delete\dots$ branch	
- <i>m</i>	$rename\ branch: \dots {\tt old_name}\ {\tt new_name}$	
<i>-v</i>	$lists\ more\ information\ about\ the\ branches$	
bundle	Move objects and refs by archive	
checkout	Checkout a branch or paths to the working tree	
- <i>b</i>	create a branch and switch to it at the same time	
cherry-pick.	Apply the change introduced by an existing commit	
citool	Graphical alternative to commit	
clean	Remove untracked files from the working tree	
clone	Clone a repository into a new directory	
commit	Record changes to the repository	
-a	adding changes of files known by the Git repository to the commit	
-m	Set comment for commitment - correcting it with addingamend	
describe	Show the most recent tag that is reachable from a commit	
diff	Show changes between commits, commit and working tree, etc.	

fetch	Download objects and refs from another repository $$
format-patch	Prepare patches for e-mail submission
gc	Cleanup unnecessary files and optimize the local repository
grep	Print lines matching a pattern
gui	A portable graphical interface to Git
init	Create an empty git repository or reinitialize an existing one
log	Show commit logs
merge	Join two or more development histories together
mv	Move or rename a file, a directory, or a symlink $$
notes	Add/inspect commit notes
pull	Fetch from and merge with another repository or a local branch
push	Update remote refs along with associated objects
rebase	Forward-port local commits to the updated upstream head
reset	Reset current HEAD to the specified state (Remove a $file$ from staging area)
revert	Revert an existing commit
rm	Remove files from the working tree and from the index
<i>-r</i>	$remove\ recursive\ -\ for\ removing\ additionally\ from\ repo,\ add\ \texttt{cached}\ *$
shortlog	Summarize git log output
show	Show various types of objects
stash	Stash the changes in a dirty working directory away
status	Show the working tree status
submodule	Initialize, update or inspect submodules
tag	Create, list, delete or verify a tag object signed with GPG
gitk	The git repository browser

M 1 .	
Manipulators config	Get and set repository or global op-
001116	tions
fast-export.	Git data exporter
fast-import.	Backend for fast Git data importers
filter-brancl	n
	Rewrite branches
mergetool	Run merge conflict resolution tools to resolve merge conflicts
pack-refs	Pack heads and tags for efficient repository access
prune	Prune all unreachable objects from the object database
reflog	Manage reflog information
relink	Hardlink common objects in local repositories
remote	Manage set of tracked repositories
-v	show details about the remotes
repack	Pack unpacked objects in a repository
replace	Create, list, delete refs to replace ob-

Interrogators

jects

Interrogators		
annotate Annotate file lines with commit infor-		
mation		
blame Show what revision and author last mod-		
ified each line of a file		
cherry Find commits not merged upstream		
count-objects		
Count unpacked number of objects and their disk consumption		
difftool Show changes using common diff tools		
fsck Verifies the connectivity and validity of the objects in the database		
get-tar-commit-id		
Extract commit ID from an archive created using archive		
help Display help information about git		
instaweb Instantly browse your working reposi-		

tory in gitweb

merge-tree Show three-way merge without touch-	merge-index. Run a merge for files needing merging
ing index	mktag Creates a tag object
rerere Reuse recorded resolution of conflicted merges	mktree Build a tree-object from ls-tree format- ted text
rev-parse Pick out and massage parameters	pack-objects Create a packed archive of objects
show-branch. Show branches and their commits verify-tag Check the GPG signature of tags	prune-packed Remove extra objects that are already in pack files
	read-tree Reads tree information into the index
whatchanged. Show logs with difference each commit introduces	symbolic-ref Read and modify symbolic refs
moroduces	unpack-objects
Let me the south Others	Unpack objects from a packed archive
Interacting with Others archimport Import an Arch repository into git	update-index Register file contents in the working
cvsexportcommit	tree to the index
Export a single commit to a CVS check- out	update-ref Update the object name stored in a ref safely
cvsimport Salvage your data out of another SCM people love to hate	write-tree Create a tree object from the current index
cvsserver A CVS server emulator for git	
<pre>imap-send Send a collection of patches from stdin</pre>	Interrogators (plumbing) cat-file Provide content or type and size information for repository objects
rent branch request-pull Generates a summary of pending chan-	diff-files Compares files in the working tree and the index
ges	diff-index Compares content and mode of blobs between the index and repository
send-email Send a collection of patches as emails svn Bidirectional operation between a Sub-	diff-tree Compares the content and mode of blobs found via two tree objects
version repository and git	for-each-ref Output information on each ref
	ls-files Show information about files in the in-
Manipulators (plumbing)	dex and the working tree
apply Apply a patch to files and/or to the	ls-remote List references in a remote repository
index	ls-tree List the contents of a tree object
checkout-index Copy files from the index to the work-	merge-base Find as good common ancestors as pos-
ing tree	sible for a merge
commit-tree. Create a new commit object	name-rev Find symbolic names for given revs
hash-object. Compute object ID and optionally cre-	pack-redundant
ates a blob from a file	Find redundant pack files
index-pack Build pack index file for an existing packed archive	rev-list Lists commit objects in reverse chrono- logical order
merge-file Run a three-way file merge	<pre>show-index Show packed archive index</pre>

show-ref..... List references in a local repository unpack-file. Creates a temporary file with a blobs contents var..... Show a git logical variable verify-pack. Validate packed git archive files Synching repositories daemon..... A really simple server for git repositofetch-pack.. Receive missing objects from another repository http-backend Server side implementation of Git over HTTP send-pack... Push objects over git protocol to another repository update-server-info Update auxiliary info file to help dumb servers Helper commands http-fetch.. Download from a remote git repository via HTTP http-push... Push objects over HTTP/DAV to another repository parse-remote Routines to help parsing remote repository access parameters receive-pack Receive what is pushed into the reposshell Restricted login shell foronly SSH acupload-archive Send archive back toarchive upload-pack. Send objects packed back tofetch-pack Internal helper commands check-attr.. Display gitattributes information check-ref-format

Ensures that a reference name is well

Produce a merge commit message

formed

fmt-merge-msg

mailinfo..... Extracts patch and authorship from a single e-mail message

 $\begin{tabular}{ll} \tt mailsplit \dots Simple UNIX mbox splitter program \\ \tt merge-one-file \\ \end{tabular}$

The standard helper program to use with merge-index

patch-id..... Compute unique ID for a patch

sh-setup..... Common git shell script setup code

stripspace.. Filter out empty lines
